Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Acknowledgement is made of the amendment filed on June 28, 2007. Claims 1-33 are currently pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5-7, 10-12, 15-18, 21-23, 27, 28, and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Kajita (US 4,954,913).

Kajita teaches a scanner and method of scanning comprising:

- a) a flatbed-scanner scan bar movable along a subscan axis;
- b) a first scan-bar homing reference;
- c) a second scan-bar homing reference spaced apart along the subscan axis from the first scan-bar homing reference; and
- d) an image placement area disposed between the first and second scan-bar homing references (figure 1);

the scanner wherein the first scan-bar homing reference and the second scan-bar homing reference are different from one another;

Art Unit: 2876

the scanner wherein the first scan-bar homing reference and the second scan-bar homing reference are each further comprises of a position switch; and

the scanner where the position switch comprises an optical break sensor.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 2-4, 8, 9, 13, 14, 19, 20, 24-26, 29, 30, 32, and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kajita in view of Hsu et al. (US 7,259,896) (hereinafter referred to as 'Hsu').

The teachings of Kajita have been discussed above.

Kajita lacks the teaching of a calibration reference.

Art Unit: 2876

Hsu teaches a scanner wherein a homing reference is a homing and calibration reference (col. 2, lines 58-61);

the scanner wherein the calibration reference is colored (figure 5); and

the scanner wherein the color is selected from a group consisting of white, black, gray, and a combination of the foregoing colors.

One of ordinary skill in the art would have readily recognized that providing the Kajita invention with a calibration reference would have been beneficial for maintaining the proper operation of the scanner, thereby helping to prevent the erroneous scanning of an image. Therefore, it would have been obvious, at the time the invention was made, to modify the teachings of Kajita with the aforementioned teaching of Hsu.

Response to Arguments

6. Applicant's arguments with respect to claims 1-33 have been considered but are moot in view of the new ground(s) of rejection.
